INTRODUCTION

This guide will help you replace your CD drive if you've determined that it is no longer working.

TOOLS:

- [Phillips #0 Screwdriver](#) (1)
 - [iFixit Opening Tools](#) (1)
-

Step 1 — CD/DVD Drive

- Unscrew the three 4.6 mm screws holding the panel using a #1 size Phillips head screwdriver. The panel is centered on the bottom of the laptop.

Step 2

- Remove the panel, firmly lifting from the indent. It is recommended that you leave the screws in the panel.

Step 3

- Unscrew the 3.9 mm screw located at the bottom right of the panel.

Step 4

- Use a plastic opening tool to pry the CD drive out of the casing.

Step 5

- Once the CD drive is out far enough to grip, pull the CD drive out to the right.

To reassemble your device, follow these instructions in reverse order.
