# INTRODUCTION

This guide will show how to remove the screen on the Toshiba Satellite.

## TOOLS:

- [Metal Spudger](#) (1)
  - [Phillips #0 Screwdriver](#) (1)
-

## Step 1 — Screen

- With the screen on a flat surface, remove the screws in each corner of the screen. There will be 4 in total.
- *Note: The screws for the screen may be hidden under rubber pad at the top of the screen so they will have to be removed.*

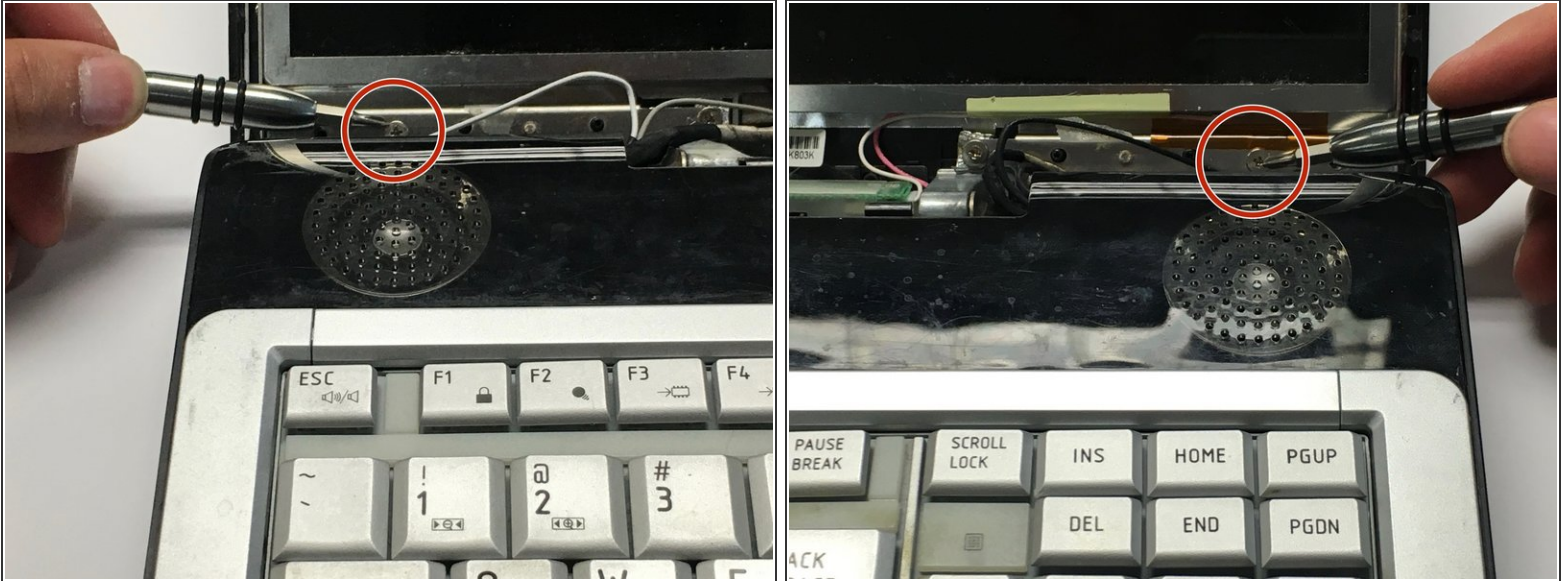

## Step 2

- Using a metal spudger wedge open the front and back cover of the screen.
- ⓘ *Take care to not damage the camera in the process.*

## Step 3

- After the front cover is removed remove the two screws at the very bottom of the screen.
  - ⓘ *This will give you access to the screws running along the side of the screen.*

## Step 4

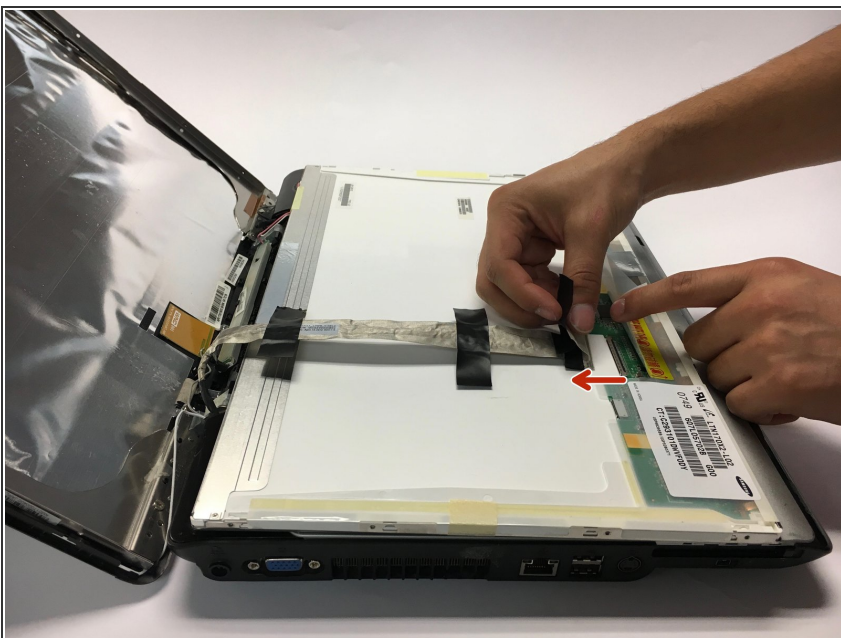

- Remove the four screws on the each side of the screen. There will be eight in total.
  - ⓘ *We recommend starting from the bottom and working upward.*

## Step 5

- Lay the screen flat on the keyboard so the back panel can be accessed.
- Remove all the tape on the video cable that connects the screen to the computer.

## Step 6

- Remove the video cable from the screen.
- After the video cable is removed the screen is free and can be removed from the computer.

To reassemble your device, follow these instructions in reverse order.
