INTRODUCTION

This Replacement guide will be teaching you step by step how to replace the ram on you Toshiba Satellite S75D-A7346

🔧 TOOLS:

- Phillips #000 Screwdriver (1)

This document was generated on 2019-10-10 04:13:39 AM (MST).

Step 1 — Taking Out The Battery

- First we have to take out the battery

- Pull the switch on the left to the left

- then hold the switch on the right to the right direction

- then pull up the bttery from the point inbetween the 2 switches

Step 2 — UnScrewing The BackPlate

- Unscrew the screw located next to the information sticker

- Then get a screw driver or prier to gently pry the covering plate

## Step 3 — Taking Out The RAM Sticks
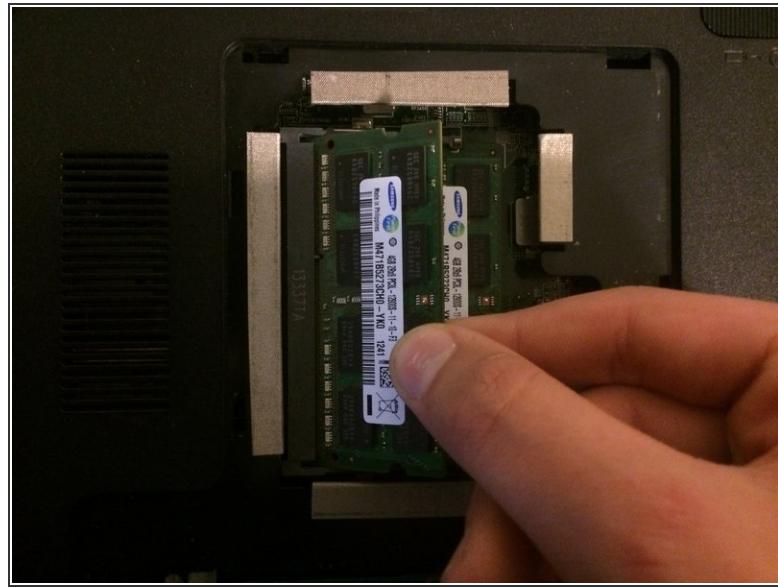

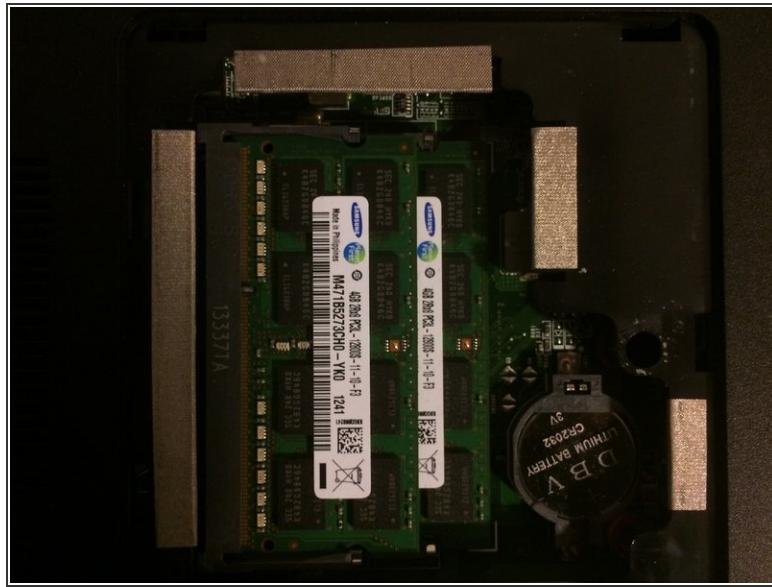

- Gently move the 2 notches on the ends of each ram stick and the stick should pop out at a 30 degree angle

- then pull that ram stick out

- you can do the same to the other one

This document was generated on 2019-10-10 04:13:39 AM (MST).

Step 4 — Adding In New RAM Sticks

- Insert the lowest ram stick first by inserting it at a 30 degree angle then push down on it

- Note: do not put a lot of pressure on it

- Note: make sure before you push it down the RAM stick is all the way in

- Note: The maximum supported RAM is 8 GB in each slot of DDR3 1600Mhz

Step 5 — Putting On The Backplate
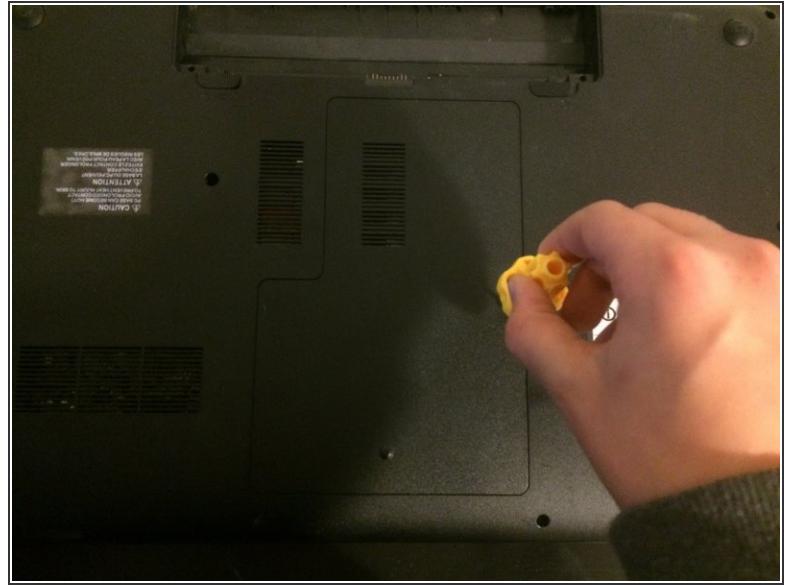

- Put on the backplate and put pressure arround the edges of the blackplate so it stays flat with the case

- Then screw in the screw next to the information sticker

Step 6 — Putting In The Battery
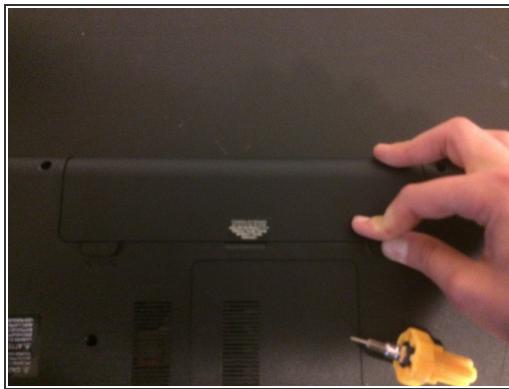

- Place the battery in the slot

- Then hold the right switch to the right and push the battery in, then release the switch.

- move the left switch to the right
