## INTRODUCTION

The optical drive is a relatively simple replacement. It must also be removed to access the keyboard.

### TOOLS:

- [Phillips #0 Screwdriver \(1\)](#)
- [iFixit Opening Tools \(1\)](#)

## Step 1 — Battery

- Slide lock 1, located on the right side, to the unlocked position.

## Step 2

- While holding lock 2 (left side) in the unlocked position, pull out the battery pack.

💡 It is not necessary to hold open lock 2 for re-installation.

## Step 3 — Back Panel

- Unscrew the single screw on the RAM access panel using a Phillips #0 screwdriver.
- *(i)* The screw will not come apart from the panel.
- Use a plastic opening tool to pry off the access panel.

## Step 4

- Remove the 11mm screw from the right side of the Hard Drive access panel using a Phillips #0 screwdriver.
- Remove the 3.5 mm screw from the left side of the access panel using a Phillips #0 screwdriver.
- Use a plastic opening tool to pry off the access panel from the bottom.

## Step 5

- Remove twelve 5.5mm screws from the main back cover using a Phillips #0 screwdriver.
- Remove three 11mm screws from main back cover and mini access panel using a Phillips #0 screwdriver.
- Remove two 9.5mm screws from the main back cover using a Phillips #0 screwdriver.

## Step 6

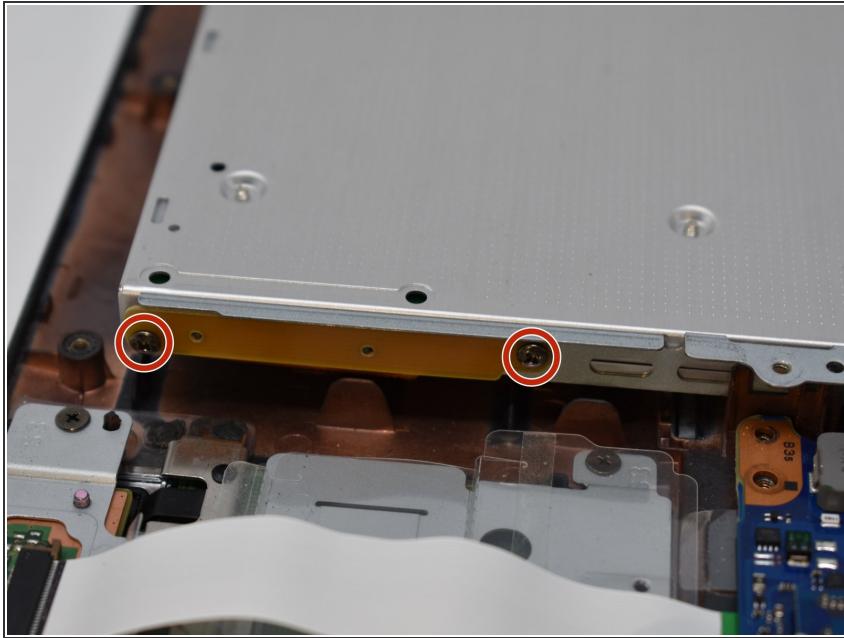

- Lift the hard drive out of the access panel.
- Disconnect the SATA connector from the hard drive by pulling straight out.

## Step 7

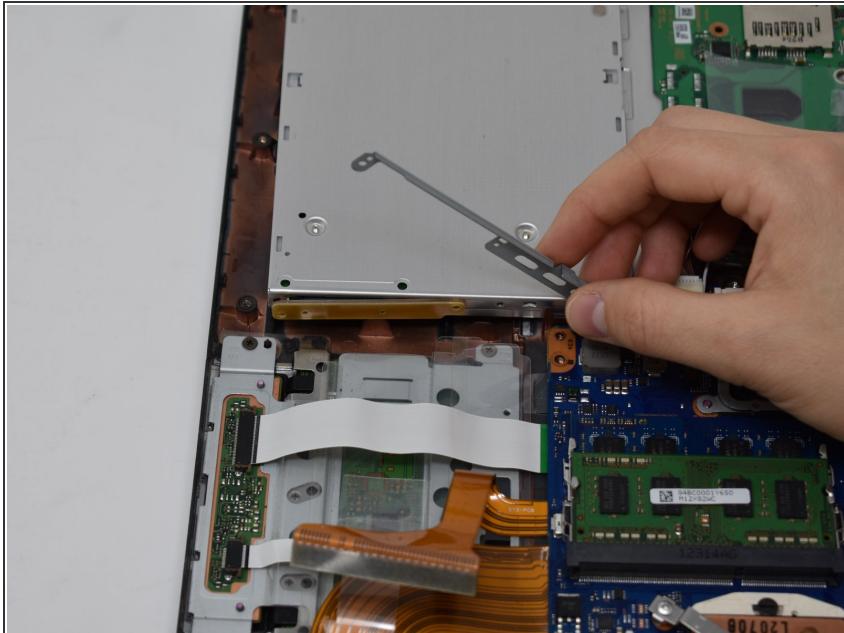

- Insert the plastic opening tool into the edge of the laptop and pry off the back cover.

## Step 8 — Optical Drive

- Remove two 2.5 mm screws from the side of the optical drive using a Phillips #0 screwdriver.

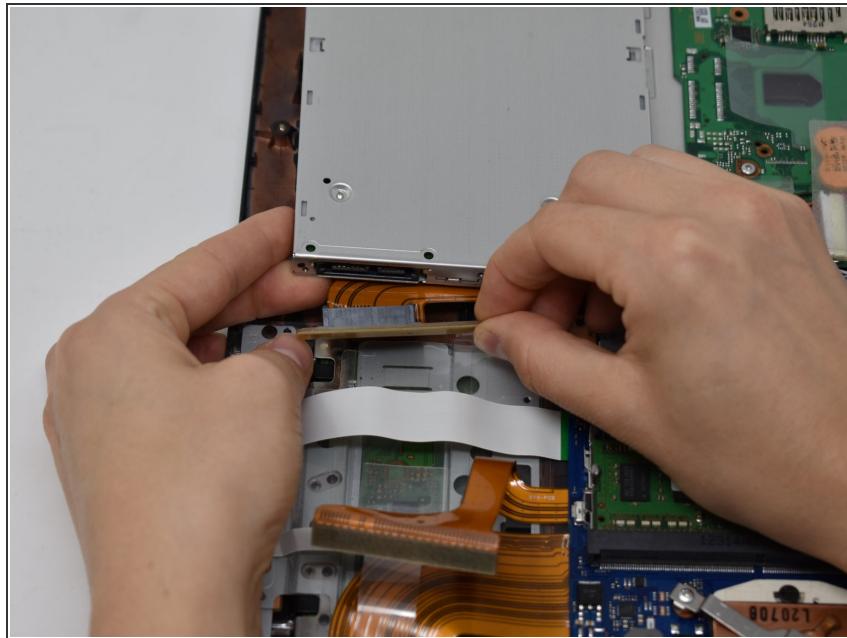

## Step 9

- Lift up the bracket covering the connector.

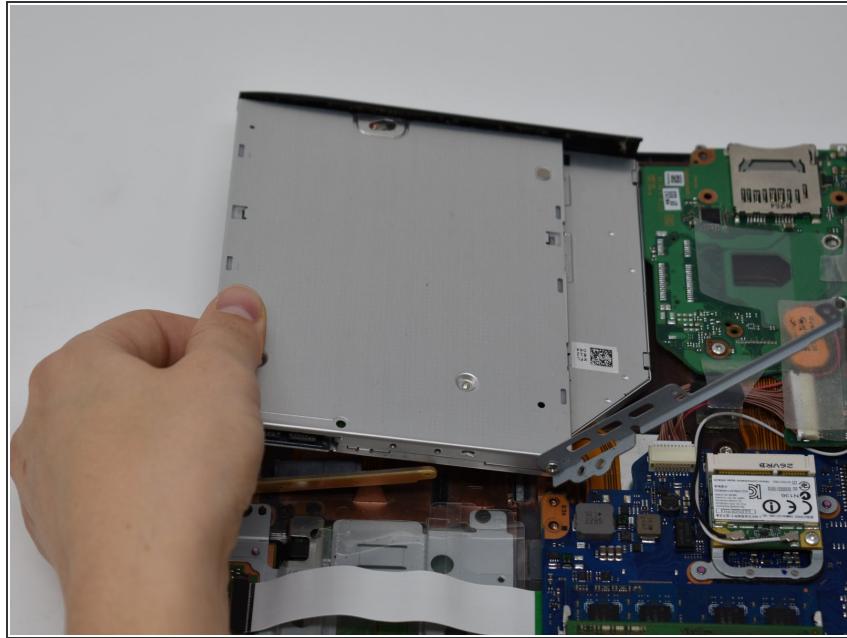

*(i)* This bracket should not be fully removed from the optical drive.

## Step 10

- Gently remove the SATA connector from the port.

## Step 11

- Gently lift the optical drive out.

To reassemble your device, follow these instructions in reverse order.
