

Trek 820 Light Mount Replacement

How to easily install a Trek 820 light mount on your bicycle handlebars.

Written By: Kaveh Karimiyanha

INTRODUCTION

You may need to replace the light mount on your bicycle because the light has burned out or you require a brighter light. This guide shows the proper steps to install a replacement Light Mount for a Trek 820 (or similar) bicycle. No tools are necessary for this easy repair.

PARTS:

- [light mount](#) (1)
-

Step 1 — Light Mount

- Clean the area where the light mount will be installed with a soft cloth.
- Placing the light mount close to the center stem.

Step 2

- Remove the strap from the light mount fitting.
- Stretch the strap clockwise around the handlebars.

Step 3

- Slide the strap through the slot and fasten to a snug, but moveable fit.
- ⓘ Do not fasten too tight as this will make it difficult to fine tune light mount placement.

Step 4

- Pull the strap tightly through the clasps at the bottom of the mount.

Step 5

- Place the fastening screw in the rear screw port on the light mount.
- Twist the screw clockwise using your hands until fully fastened.

Now you have a light mount ready for safer night rides on your Trek bicycle!
