Step 1 — Back Panel

- To remove the back panel, you will need to use a plastic opening tool and slowly separate the back panel from the device.
Step 2 — Battery

⚠ This step will require soldering. If you are unfamiliar with soldering then we recommend that you get

help from another person or use the [soldering guide](#) made by Ifixit to help.

● Solder the connections off for the battery.

Step 3

● Disconnect the screen/digitizer connection. Use tweezers and pull each grey end of the connection until there is a small gap between the grey and white on the connector to the motherboard. The connection should be easily removable.

● Pull the cable away and clear from under the battery to avoid damage to the connection.

Step 4

- Pry battery up from adhesive. Use a type of adhesive remover. Nail polish remover works well.

To reassemble your device, follow these instructions in reverse order.
