INTRODUCTION

Here we will be removing the small michrophone in the back of the taco. This task requires removing the logic board before it may be reached.

🔧 TOOLS:

- Phillips #00 Screwdriver (1)
- Phillips #0 Screwdriver (1)
- iFixit Opening Tools (1)

Step 1 — VENSTAR Taco Disassembly

- Starting with the Taco on its side, use the plastic opening tool to pop off the outer casing near the base.

⚠️ The base labeled "VENSTAR TACO" is glued. Be careful separating the two sides of the device.

Step 2

- Repeat the previous step on the opposite side to remove the other outer casing.

Step 3

- Using a Phillips PH0 3 mm-bit screwdriver, remove the six screws on the inner layer of the Taco.

⚠ The screws are small and can get stuck. Use tweezers to pull them out if you are having trouble.

Step 4

- From the same side you just unscrewed, use a plastic opening tool to unwedge the inner cover on both sides of the base.

Step 5

- Slide off the inner cover. It pulls apart and is held on by a small amount of glue.
Step 6 — Logic Board Replacement

- Remove the rubber covering from the buttons.

Step 7

● Remove the black fabric covering the logic board.

Step 8

● Move the battery out of the way of the connector.

Step 9

- Undo the connector of the flat white ribbon between the switches and the logic board.

Step 10

- Undo the two black 3mm screws on the logic board using the PH0 screwdriver.
This document was generated on 2019-09-20 01:29:36 PM (MST).
Step 11

- Gently pull out the logic board.

- ⓘ Note that the battery and the logic board are connected and must be removed together.

Step 12 — Microphone Replacement

- Below the logic board, the small black microphone is resting within the case.

To reassemble your device, follow these instructions in reverse order.
