

Vodafone Smart V8 Display Replacement

VFD 710 teardown / display / battery / replace

Written By: brejzek

INTRODUCTION

This can give you more insight on how this device was assembled as I didn't find any advice on VFD 710 or Vodafone V8 made by ZTE.

TOOLS:

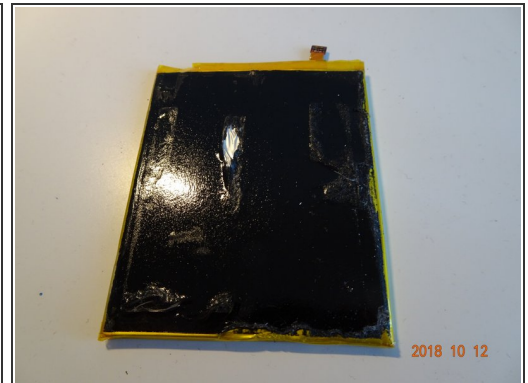

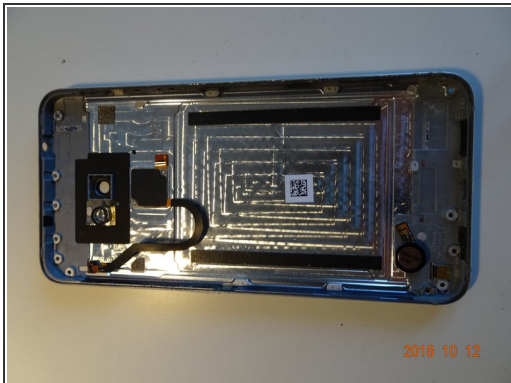

- [Essential Electronics Toolkit](#) (1)
-

Step 1 — Display

- To open the device you need to apply pressure at the bottom and up to get rid of the glued mini covers.

Step 2

- Put the back cover gently away - remove the finger sensor cable gently from the motherboard. Also put away gently battery and digitizer gently pull the cables from the glue as well the battery is well glued (you might damage it-very tight).

Step 3

- this was a complete teardown of the device - you can replace virtually anything.

To reassemble your device, follow these instructions in reverse order.
