

When do I need to re-waterproof my Vaude garment?

When water no longer beads up on the outside of the material but rather a wet spot develops, it's time to re-waterproof your Vaude product.

INTRODUCTION

When water no longer beads up on the outside of the material but rather a wet spot develops, it's time to re-waterproof. We'll show you how to test your waterproofing in just a few simple steps.

TOOLS:

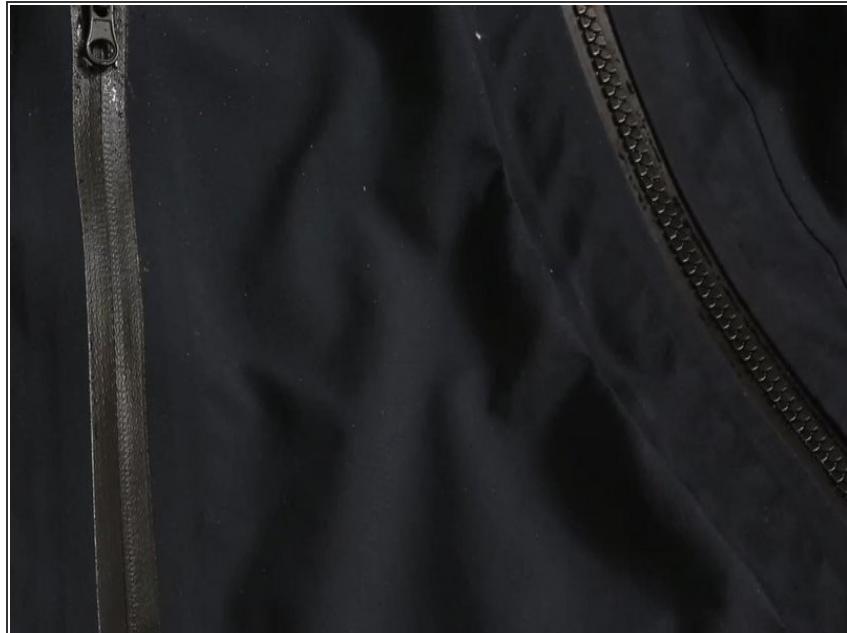

- Spray Bottle with Water (1)

Step 1 — When do I need to re-waterproof my Vaude garment?

- Hang your garment on a clothes hanger and fill your spray bottle with water.

Step 2

- Spray the surface of the garment several times.

Step 3

- If the water “beads up” and doesn’t soak into the surface, it is not necessary to re-waterproof your garment.
