INTRODUCTION

This guide shows how to safely use iFixit's adhesive remover.

🔧 TOOLS:

- Safety Glasses (1)
- Latex or nitrile gloves (1)
- iFixit Adhesive Remover (for Battery, Screen, and Glass Adhesive) (1)

Step 1 — iFixit Adhesive Remover Preparation

⚠ iFixit adhesive remover contains acetone, a mild skin and eye irritant.

- Wear eye protection when handling and applying the adhesive remover. (Eye protection is included in your kit.)

- **Do not** wear contact lenses without eye protection.

- Protective gloves are also included in your kit. If you are concerned about possible skin irritation, put your gloves on now.

Step 2

- Pull off the black rubber stopper from your bottle of adhesive remover.

⚠ Twist to loosen or remove the bottle cap before you cut the applicator tip.

  ⓘ This unseals the bottle and allows the pressure to equalize before you cut the applicator tip. **If you skip this step, the adhesive remover may spray out unexpectedly when the tip is cut.**

- Use scissors to cut off the sealed tip of the applicator.

  ⓘ Cutting close to the narrow tip will give you better control so you can apply the adhesive remover in small amounts.

⚠ Twist and close the bottle cap securely before you proceed further.
