Step 1 — Power Board

- Remove the four 1.7 mm Phillips #0 screws located on the bottom of the device.

- Lift up the bottom of the device.

⚠ Carefully lift the bottom of the device up as to not damage the ribbon cable connecting it.
Step 2

- Remove the two 1.7 mm Phillips #0 screws holding the white face place onto the inside of the device's bottom.

- Using an iFixit opening tool on the side without the black adhesive, carefully lift up the white face plate.

⚠ Lifting too quickly could damage the ribbon cable still attached.

Step 3

- Using the tweezers, lift up on the black tab holding the ribbon cable down.

- Carefully pull the ribbon cable back and out of the slot.

Step 4

- Remove the two 1.7 mm Phillips #0 screws holding the power board in.

- Carefully flip the board over.

- Remove the red connector from its socket with a pair of tweezers.

Step 5 — LCD (Display)

- Insert an iFixit opening tool into the lining on the front casing and pry it apart. Do this for both sides.

- Further remove the front casing off from the device manually with your hands.

Step 6

- Remove the four 1.7 mm Phillips #0 screws holding the LCD onto the front of the device.

This document was generated on 2020-04-06 04:45:58 AM (MST).

Step 7

- Carefully flip the LCD display over to expose the ribbon cable connecting it.

- Lift the black tab holding the cable down, and carefully put it out of the socket.

To reassemble your device, follow these instructions in reverse order.
