# iMac G4 15" 700 MHz EMC 1873 RAM DIMM Replacement

Replace or upgrade the DIMM RAM Module on your iMac G4 15".

Written By: Ryan Kozak

INTRODUCTION

Upgrade your RAM DIMM Module for more memory.

🔧 TOOLS:

- Phillips #00 Screwdriver (1)

Step 1 — Outer Base Plate

(i) Place the computer monitor face down on a safe, harmless surface.

● Using a Phillips #00 screw driver, remove the four 6.86 mm screws from the metal plate.

Step 2

● Remove the metal plate from bottom of the iMac G4.

(i) The four screws do not completely separate from the metal plate.

Step 3 — RAM DIMM

- Release the tabs on each side of the module by simultaneously pushing each tab away from the RAM.

- (i) These tabs lock the module in place and releasing them will cause the module to "pop" up.

- Remove the RAM module from the iMac.

To reassemble your device, follow these instructions in reverse order.
