

iMac Intel 21.5" EMC 2544 CPU Replacement

Prereq only for removing the heat sink.

Written By: Walter Galan

INTRODUCTION

Prereq only for removing the heat sink.

TOOLS:

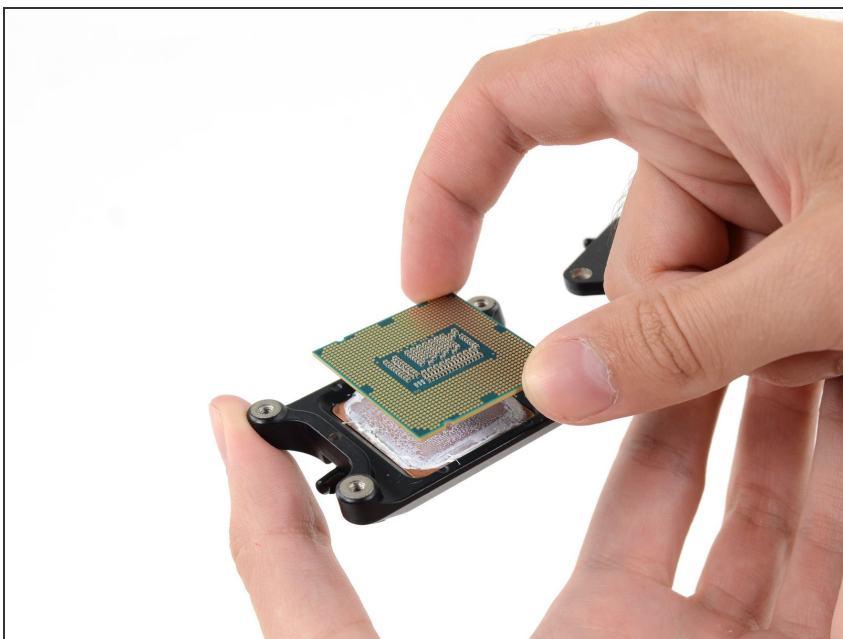

- [Spudger](#) (1)
-

Step 1 — CPU

- i** The CPU will most likely be stuck to the heat sink with thermal compound.
- Insert the flat edge of a spudger between the CPU and heat sink.
 - Gently pry the CPU off the heat sink by slightly twisting the spudger upwards.

Step 2

- Remove the CPU from the heat sink. Be careful not to touch the contacts.

To reassemble your device, follow these instructions in reverse order.
