

# iPhone 6 Plus Rear Facing Camera Replacement

Prereq only, battery removed.

Written By: Walter Galan

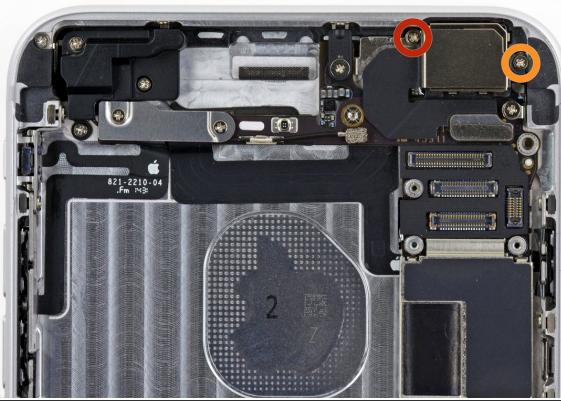

## INTRODUCTION

Prereq only, battery removed.

### TOOLS:

- **Phillips #000 Screwdriver** (1)
- **Tweezers** (1)

## Step 1 — Rear Facing Camera

- Remove the following screws securing the rear-facing camera bracket to the rear case:
  - One 1.7 mm Phillips #00 screw
  - One 2.3 mm Phillips #00 screw

## Step 2

- Lift and remove the rear-facing camera bracket out of the iPhone.

## Step 3

- Use the flat end of a spudger to disconnect the rear-facing camera connector from its socket on the logic board.

## Step 4

- Carefully lift and remove the rear-facing camera out of the iPhone.

To reassemble your device, follow these instructions in reverse order.
