

iPhone 6s The screen Replacement

How to replace a water damaged screen by undoing the phone and looking inside of it and trying to dry it out thoroughly before you can do anything else

Written By: anonymous 591

INTRODUCTION

For the official iFixit guide, [follow this link](#). This guide has been archived for historical purposes.

This will be a helpful guide on how to try and fix your water damaged iPhone.

TOOLS:

- [Phillips #0 Screwdriver](#) (1)

PARTS:

- [iPhone 6s LCD and Digitizer](#) (1)

Step 1 — The screen

- 1. Look at the phone and try to get the water out

Step 2

- 2. Next take it apart like the sim card and let that dry out for like 24 hours.

Step 3

- 3. If it doesn't help then try the rice method by putting the phone in the rice as well as the sim card.

Step 4

- 4. You can also use silica gel sachets to help with the drying.

Step 5

- 5.If that doesn't help your battery is probably damaged and you can replace it or just get a whole new phone.

Step 6

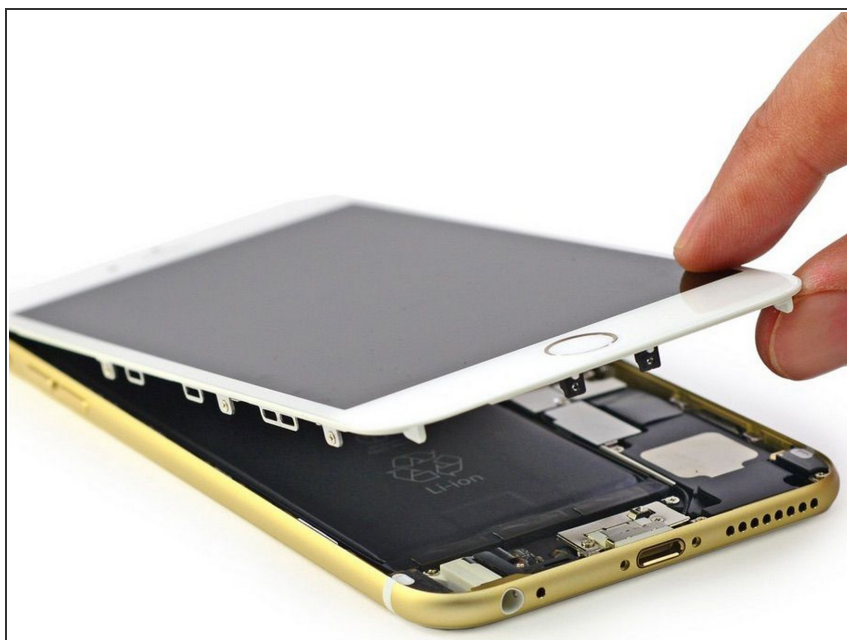

- Try to turn on the phone to see if it works if not then your screen is probably damaged if you don't see anything come on.

Step 7

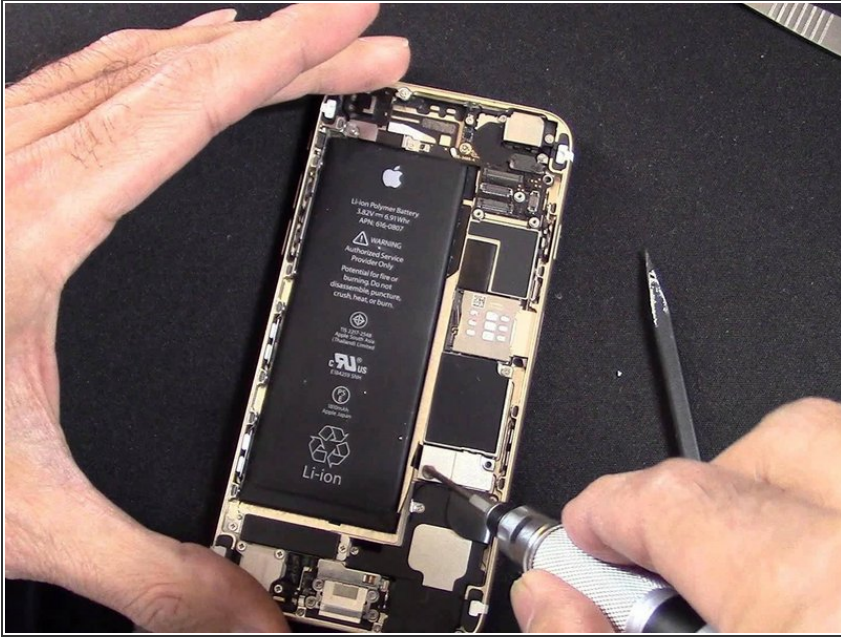

- Start by unscrewing the screen to look and identify the whole problem.

Step 8

- After you look at whats wrong, start to replace the screen

Step 9

- If you can fix the screen and get it replaced but it won't hold a charge then the battery is probably damaged and you will have to try and get a new one.

Step 10

- Once you put a new battery put the screws back in may sure it's in correctly and try to power on your phone and it should work.

Now once it's all done put the phone back together and it should be back in full functioning mode
