

iPhone XR iOS 13 Battery Replacement

I found a way to work around the iPhone XR battery replacement. With iOS 13 XR battery replacement does not work with Brand New Aftermarket!

Written By: Mark D Schlossman

INTRODUCTION

I found a way to work around the iPhone XR battery replacement. With iOS 13 XR battery replacement does not work with Brand New Aftermarket wouldn't charge up the phone!

My CoWorkers and I struggled to find a solution for our customers.

This is a **workaround** for anyone having issues with XR Battery Replacements

iPhone 8 Batteries work charges, shows health on programs on pc where the XRs did not.

iPhone 8 Batteries have 3.82 V 2691 mAh

iPhone XR Batteries have 3.82 V and 3050 mAh

The lower mAh affects how long the battery lasts after a full charge.

It may die quicker than have 3000 mAh but it works

iPhone 8+ Will did not fit so I put an iPhone 8 is fully functional.

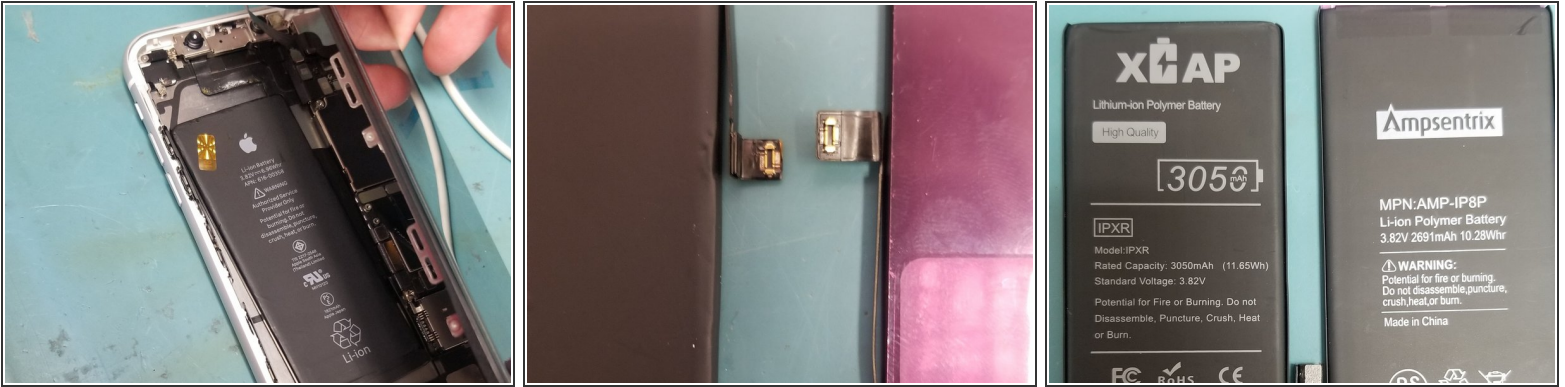

Pulls low Amps out Maxing out at 1.79

PARTS:

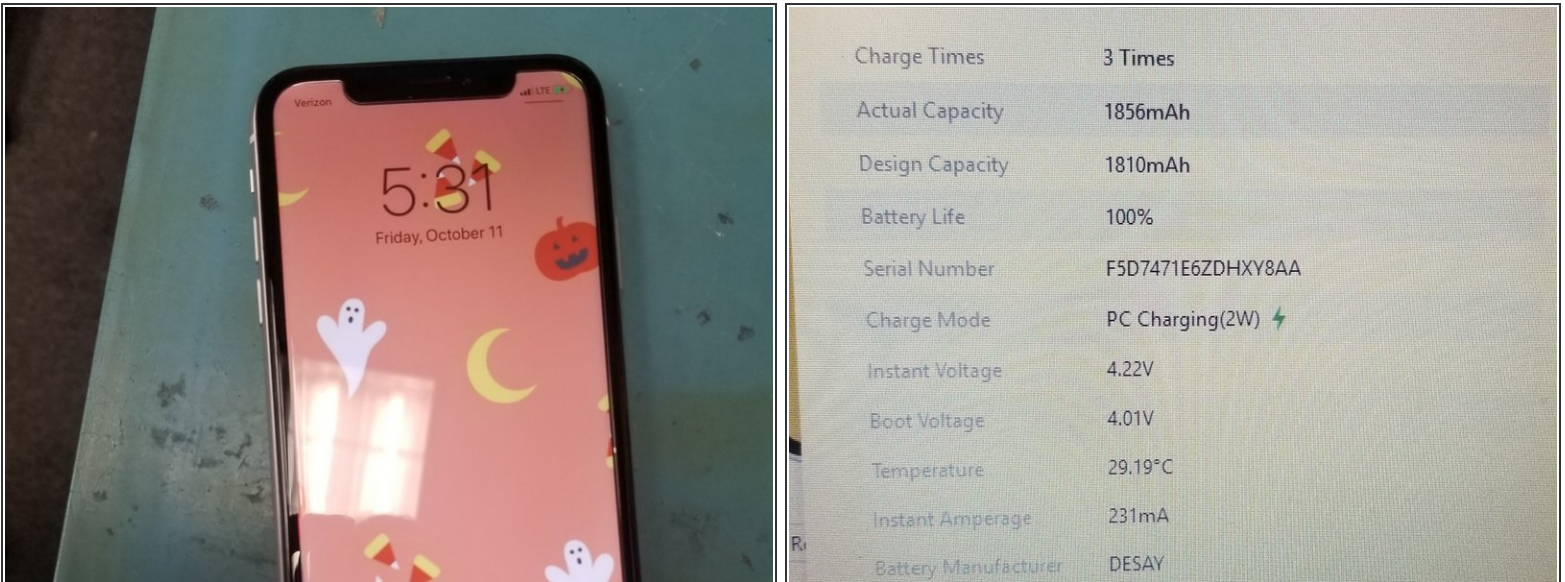

- [iPhone 8 Replacement Battery](#) (1)

Step 1 — Battery Replacement

- iPhone XR and iPhone 8 Battery Comparison.
- Same Volts Same Connection Size

Step 2

- Phone is Charging
- Battery Health Information showing on Computer Software

Rig the battery in with adhesive best you can to reduce damages since the battery is smaller then the XR battery.
