

# iPhone XS Housing/Back Glass Replacement

Is the glass on the back of your iPhone X broken, shattered, or heavily scratched? With our detailed instructions you can replace the back cover yourself!

Written By: JaL

## INTRODUCTION

Since the back glass itself is very difficult to remove, we recommend replacing the entire housing (a.k.a. enclosure) consisting of the stainless steel frame and the rear glass.

Make a full backup of your iPhone before repairing it.

Be particularly careful when loosening the front camera and FaceID unit and the earpiece, as these cannot be replaced without losing the FaceID function.
