

iRobot Roomba 4100 Main Brush Replacement

This is a guide for either maintenance or removal of the main brush in the Red Roomba 4100.

Written By: Samantha Barrett

INTRODUCTION

This is an easy guide. It should only take a few minutes to complete and it doesn't require any tools.

Step 1 — Brush Guard

- Lay the Roomba upside down on a flat surface with the blue strip away from you.

Step 2

- Use your index fingers to pull the yellow tabs towards you.
- While still pulling the yellow tabs with your index fingers, tilt up the brush guard.
- ☑ For reassembly, make sure to push in the brush guard until it clicks into place.

Step 3

- Pull back the brush guard to unhook it from the latches.
- Remove the brush guard by lifting it up and out of the Roomba.
- ⓘ This picture has a change in orientation to illustrate the latches. Continue disassembling the Roomba with the blue strip away from you.

Step 4 — Main Brush

- Set the brush guard aside.
- ⓘ The main brush is the bristly one that is closest to the blue strip.

Step 5

- Remove the main brush by grabbing it and pulling it up and out of the Roomba.
- ☑ For reassembly, orient the Roomba with the battery closest to you:
 - First, insert the black end of the main brush into the black square opening on the right side.
 - Second, lay the main brush back into place.

To reassemble your device, follow these instructions in reverse order.
