# INTRODUCTION

This guide will go over how to replace the motor in your iRobot Roomba 805.

---

## TOOLS:

- [Phillips #0 Screwdriver](#) (1)
  - [Phillips #00 Screwdriver](#) (1)
  - [Tri-wing Screwdriver](#) (1)
-

## Step 1 — Side brush

- Remove the single 6.1mm Phillips #0 screw from the side brush.

## Step 2

- Lift the side brush, removing it from the motor.

## Step 3 — Motor

- Remove the battery panel and the two screws behind the wheels.
- Lift up the back panel and remove it from the Roomba.

## Step 4

- Remove the three screws holding down the motor. Be aware one requires a tristar bit and the plastic piece under that screw comes free easily.
- Once the motor is loose you can pull it up out of the Roomba.

## Step 5

- Hold the motor by the bottom and the edge of the cap and remove the cap.

To reassemble your device, follow these instructions in reverse order.
