

iRobot Roomba 860 Filter Replacement

This guide will replace the filter in the iRobot Roomba 860.

Written By: Stephen Yezukevicz

INTRODUCTION

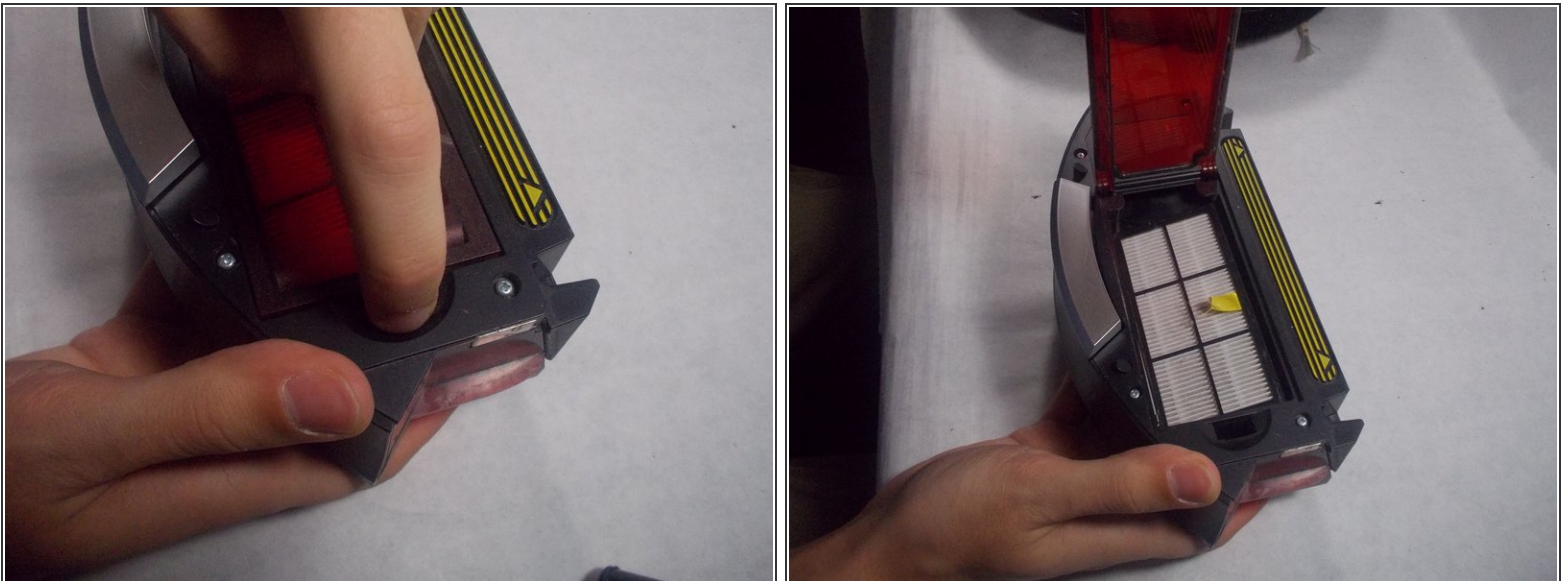

This guide will replace the filter in the iRobot Roomba 860, this is a quick and simple guide. No tools and prior knowledge is needed for this repair. I would recommend a flat and clean surface to work on. Also be aware that you can get dirty while doing this repair.

Step 1 — Filter

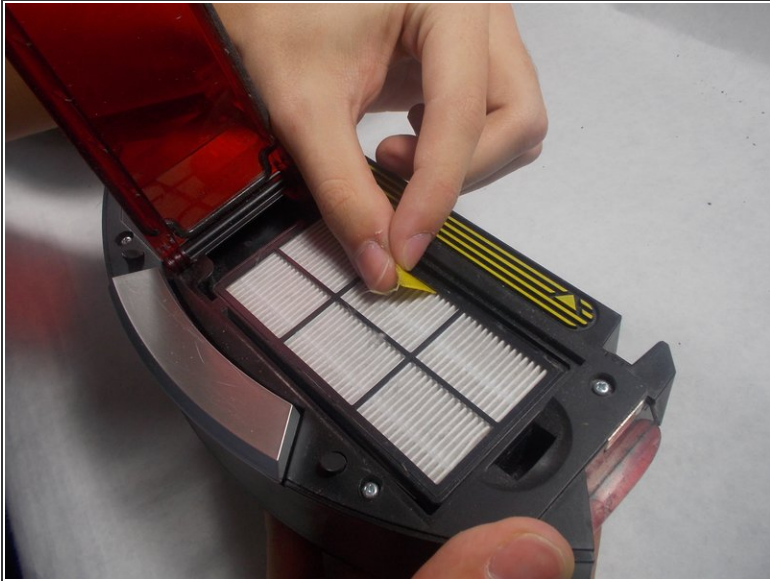

- Orient the Roomba so that the device is on its wheels and the words can be read from left to right.
- Press the large button on the Roomba that is located closest to you.
- Pull towards you to remove dust bin.
- Now place dust bin flat with the large button towards you.

Step 2

- With the dust bin completely detached from the Roomba, press the tab that is located on your right.
- Now lift red plastic cover to begin removing the filter.

Step 3

- Using the yellow ribbon that is located at the top of the filter, pull it towards you.
- Carefully remove the used filter.

To reassemble your device, follow these instructions in reverse order.
